

RELEASE GUIDE

Service Contracts, Hour Tracking & Aide Time Sheets

User manual and acceptance-testing guide

Application	Creative Abilities Therapy Services
Release	Service contracts and hour budgets; the hour-tracking sheet; aide time sheets
Audience	Admin staff, therapists, aides and parent testers
Affects	Client services, session scheduling, therapist portal, client portal
Document date	31 August 2026

Read this first. This release does two separate things, and which one affects you depends on your role.

1. Every availed service now needs a contract. Until now a therapist could schedule any service a client had availed. From this release a service needs a pool of hours, issued by an admin, valid for a fixed period. Sessions draw from that pool, and when it empties the service can no longer be scheduled.
2. Aides now record their work in the system. Hours are logged day by day, rolled into an FSCD time sheet, signed by the aide and the parent, and filed for the office — replacing the paper form.

Section 10 lists behaviours that look like bugs but are deliberate. Please read it before raising a ticket.

What changed, in plain terms

The clinic has kept two things on paper and in spreadsheets: the sheet of authorized hours per child, and the FSCD time sheet an aide fills in and a parent signs. Both were maintained by hand, and both could drift away from what actually happened. This release moves both into the application.

Two halves, one release

Half one — contracted service hours	Half two — aide time sheets
An admin issues a service contract: a pool of hours over a fixed period against one availed service. Therapists book sessions, which draw from the pool. The hour-tracking sheet shows the result, month by month.	An aide logs hours against a child, day by day, across the four columns of the FSCD form. Those hours are rolled into a time sheet, signed by the aide and then by the parent, and read by the admin.
Admins and therapists	Aides, parents and admins

The two halves do not feed each other.

An aide's logged hours do not draw from a service contract, and they never appear on the hour-tracking sheet — that sheet reads contracts and booked sessions only. They are two records of two different kinds of work, and testing one tells you nothing about the other.

Who sees what

Role	New menu items	What they can do
Admin	Hour Tracking, Timesheets	Issue and manage contracts on the client's Contracts tab; read the clinic-wide hour-tracking sheet; read and remove signed time sheets
Therapist	Hour Tracking	Book sessions against contracts; read their own hour-tracking sheet
Aide	Hours, Timesheets	Log hours day by day; generate and sign a time sheet for a period
Parent	Timesheets	Read and sign their child's time sheets

How contract hours move

Event	Effect on the contract
A session is booked against the service	Hours are drawn from the pool immediately, at the length the session was booked for.
The session is cancelled or marked no-show	The hours go straight back into the pool.
The session's time or length is edited	The draw is recalculated. A session is never blocked by its own existing hours.
The session is marked completed	Nothing. The booked length is what was authorized; a visit that overruns by ten minutes must not quietly resize the pool.

An admin edits the contract's hours

The pool resizes. It can never be cut below the hours already drawn.

The balance is never stored.

It is added up from the sessions themselves every time it is shown. There is no running total that can fall out of step with the schedule, which also means you can never repair a balance directly — you change the sessions, or you change the contract.

Before you start testing

1. Line up your logins

Four roles are involved. Keep several browsers (or private windows) open so you can switch between them without logging out — many of the test scripts ask you to act as one role and check the result as another.

You need	For
An admin	Issuing contracts, the clinic-wide sheet, reading signed time sheets
A therapist	Booking sessions against contracts
An aide	Logging hours and generating time sheets
A parent	Signing a time sheet in the client portal

The aide account needs the right job title.
A user counts as an aide when their team-member position ends in the word “aide”
— both “Behavioural & Developmental Aide” and “Behaviour Aide” qualify. “Behavioural Consultant/Therapist (BC)” deliberately does not, and a therapist with no team-member record at all keeps the billing side. If your test aide is showing Billing and Invoices instead of Hours and Timesheets, check the position on their team-member record before reporting it.

2. Expect your existing services to already have a contract

Nothing had contracts before this release, so the upgrade issues one automatically for every availed service already in the system. Without that, every therapist would find their whole caseload unbookable on the morning of the release.

On a backfilled contract	What you will see
Contract number	CON-2026-001 , CON-2026-002 , and so on
Hours	The hours already delivered, rounded up to the next ten — never fewer than 40
Period	From the service's start date, running one year. Stretched further if a session was already booked past that point.
Notes	Backfilled at contract rollout.
Funding code	Filled in from the funding already recorded on the service or the child's intake — see section 10 for the two cases deliberately left blank

These are generous placeholders, not real authorizations.
They exist so nothing breaks on day one. Part of accepting this release is reviewing them against the real approvals and correcting the hours, the period and the funding code.

3. Know where the new screens are

Screen	How to reach it	Who
--------	-----------------	-----

Contracts tab	Clients › open a client › Contracts	Admin
Hour Tracking	Sidebar › Hour Tracking	Admin, Therapist
Session form	Where you already book sessions — the services dropdown behaves differently now	Admin, Therapist
Hours	Sidebar › Hours	Aide
Timesheets	Sidebar › Timesheets	Aide, Parent, Admin

4. Suggested order

Sections 3 to 5 are the contracts half; sections 6 and 7 are the aide half. They are independent, so you can test them in either order, or hand them to two different people. The test scripts in section 8 are grouped the same way: TC-01 to TC-20 cover contracts, TC-21 to TC-32 cover the aide and the parent.

Contracted service hours — admin and therapist

SECTION 3

Issuing contracts — admin

Contracts live on the client, not on a page of their own: you issue one while looking at the service it covers, which is the only place the numbers mean anything.

The Contracts tab

Open a client and choose Contracts. You get one card per availed service, showing the service name, the therapist assigned to it, and an Issue Contract button. Underneath sits every contract issued for that service, each with its number, a status badge, its period and its hours.

A service with nothing issued yet reads:

No contract yet, so this service cannot be scheduled.

A client with no availed services at all reads:

No services availed yet. Add one before issuing a contract.

The Issue Contract form

Field	Required	Rules and notes
Allotted hours	Yes	Between 0.25 and 2000. A quarter hour is the smallest slice worth authorizing; the ceiling is a typo guard, not a policy.
Funding code	No	One of SS, BDS, BD, Counselling, split, BDS/split, Private. Pre-selected from the funder already on record, but you can change it or clear it. A contract may be issued before funding is confirmed.
Period start	Yes	The first day the service may be scheduled.
Period end	Yes	The last day. Must not fall before the start, and must not share a single day with another live contract on the same service.
Notes	No	Up to 2000 characters. Free text for the authorization reference or anything else the office needs on record.

The contract number is assigned for you, in the form `CON-2026-001`. The therapist is taken from the availed service at the moment of issue and then frozen: reassigning the service later does not move already-authorized hours to somebody else.

Status badges

Badge	Means
Active	Inside its period, hours still on it. Bookable.
Exhausted	Every authorized hour has been drawn. Not bookable.

Expired	The period has passed. Unused hours do not carry over. Not bookable.
Cancelled	Withdrawn by an admin. Not bookable, and never re-opens on its own.

Cancel or delete?

Cancel is the normal way out. It withdraws the contract without erasing what was delivered under it, so the record and the hour-tracking sheet stay intact. You may add a note explaining why.

Delete only works on a contract nothing has been booked against. Once a session has drawn hours, deleting would silently detach those hours from the session, so the system refuses:

Sessions have already drawn hours from this contract, so it can no longer be deleted. Cancel it instead.

Editing a contract

Hours, funding code, period and notes can all be edited. Two guards apply. The allotment cannot be cut below what sessions have already taken — that would drive the balance negative and report the contract exhausted for work genuinely delivered. And the new period still may not overlap another live contract on the same service.

An edit re-evaluates the status straight away, so widening an expired contract's period brings it back to Active without waiting for anything.

Booking against a contract — therapist

The session form looks much as it did. The difference is the availed-services picker, which is now a claim on hours rather than a label.

The services dropdown

Only services that have a contract covering the session's date and hours still on it appear in the list. Each entry now carries its balance, for example:

Speech Therapy — 12.5h left, to 2026-12-31

If nothing qualifies, the dropdown reads No contracted services with hours left, and the reason is one of the four below. Which one you get is deliberate — no contract yet, the contract ended, and the hours are gone are three different problems, and only one of them is the therapist's to solve.

Situation	Message
Never had a contract	Speech Therapy has no contract. An admin has to issue one before it can be scheduled.
The last contract has ended	Speech Therapy has no contract covering that date — the last one ended 30 Jun 2026.
The contract has not started yet	Speech Therapy has no contract covering that date — the next one starts 1 Sep 2026.
The pool is empty	Speech Therapy has no hours left: 40 of 40 used.

And when the contract exists but cannot cover this particular visit:

Speech Therapy has 2 of 40 hours left on its contract, and this session needs 3.

One visit, several services

A visit can still cover more than one availed service. When you pick two or more, an Hours per service block appears with a box against each one.

- Leave the boxes empty and the visit is split evenly, with the remainder landing on the last service so the parts add up to the whole. Three services across two hours becomes 0.67, 0.67 and 0.66 — not three times 0.67.
- Type your own figures and they must add up to the length of the visit. Each service then draws that amount from its own contract, so one can run out while another still has room.

If the figures do not add up, the form says so before saving:

The hours split across the selected services adds up to 1.5, but the session is 2 hours long.

Two therapists, one last hour.

The balance is re-checked at the moment of saving, not only when the form was opened. If a colleague takes the last hours while your form is open, your save is refused with the balance message above rather than quietly overdrawing the contract. Worth testing with two browsers if you can arrange it.

Cancelling and editing

Cancelling a session, or marking it no-show, returns its hours to the contract immediately — the same way it returns the slot to the calendar. Editing a session recalculates its draw, and a session is never blocked by its own existing hours, so nudging a two-hour booking ten minutes later always works, even on a contract with nothing to spare.

The hour-tracking sheet

Hour Tracking in the sidebar. Admins land on the whole clinic; therapists land on their own contracts. The layout is identical either way, and it is the layout of the spreadsheet the office already knows. Aides do not have this screen — they get Hours and Timesheets instead.

Reading a row

Column	Meaning
Client's Name	The child the contract is for.
Therapist	Who the contract authorizes. Admin view only — a therapist's own sheet would just repeat their name down the page.
Contract Start / End	The period the contract runs.
T. Hours	The funding type — the funding code, not a number.
N. Hours	The number of hours authorized.
Jan, Feb, Mar ...	Hours drawn in that month. One column per month in the window; the year is added to the label when the window crosses one.
R. Hours	Hours remaining.

Rows are grouped into a section per service, each with its own subtotals, and the page finishes with a grand total. Within a section, rows are ordered by the child's name.

Filters

Filter	Behaviour
From / To	Defaults to the current calendar year — the twelve columns the paper sheet has always had. Any contract whose period overlaps the window appears, so a year-long contract still shows on a one-month view with just that month's hours against it.
Therapist	Admin only. Lists only therapists who actually hold a contract — a name with nothing behind it would offer only an empty sheet. Picking one gives exactly what that therapist sees on their own page.
Download PDF	Prints the sheet as it currently reads, filters included, named <code>hour-tracking-{from}-to-{to}.pdf</code> .

If the window catches nothing, the page reads:

No contracts fall inside this date range.

A blank month cell is not a zero.
Blank means no session was booked that month. It is a different fact from a month that drew nothing, and the sheet keeps them apart on purpose.

Aide time sheets — aide, parent and admin

SECTION 6

Logging hours — aide

The therapist portal now splits down the middle at the billing step. A therapist bills services and raises invoices; an aide records hours on a time sheet instead. The aide's sidebar therefore shows Hours and Timesheets where a therapist's shows Hour Tracking, Billing and Invoices.

The split is enforced on the server, not just in the menu.

An aide who types the billing address by hand is redirected to their Hours screen, and a therapist who types the hours address is redirected to Billing. Hiding a menu item is not access control, so please test the address bar as well as the menu.

The Hours screen

Hours lists every day you have logged, newest first, with three figures across the top: Days Not Sheeted, Sheeted, and This Month. You can search by the child's name and filter to sheeted or unsheeted rows. An aide only ever sees their own hours.

Log Hours

Choose one Client, then add a row for each day worked with Add Day. Each row carries a date, the four hour columns of the FSCD form, and an optional note. A running total is shown per row and for the form as a whole.

Column on the form	What goes in it
Hourly Respite	Hours, to two decimals. 0.25 and 1.5 are real quantities.
Community Support Aide	As above.
Direct Hours	As above.
Indirect Hours	As above.

Rule	What happens
Each column accepts 0 to 24	A column left blank counts as zero, not as missing.
A day needs at least one hour	A row with nothing in any column is rejected: Enter at least one hour for this day.
One row per date	The same date twice on one form is rejected: This date is already on the form. Put the day's hours on one row.
Re-logging a day corrects it	Saving a date you already logged for that child overwrites the earlier figures rather than adding a second row. This is how you fix a mistake.
Notes	Up to 1000 characters per day, optional.

Correcting and removing hours

Hours can be corrected or deleted right up until a time sheet claims them. After that the row is what the parent signed for, so it stays put:

These hours are already on a timesheet and can no longer be removed.

Generating and signing a time sheet

A time sheet has three parties: the aide who logged the hours and signs as they generate, the parent who confirms them, and the admin who reads the signed result. It records hours only — there are no rates or amounts anywhere on the form.

Step 1 — the aide generates and signs

Timesheets > Generate Timesheet. The modal asks for four things:

Field	Notes
Client	Only children you have hours still waiting to be sheeted are offered. A child with nothing outstanding does not appear.
Date From	The first day of the period.
Date To	The last day. Must not fall before the start.
Your signature	Drawn in the signature pad. The aide signs as they generate, so the form reaches the family already signed on one side.

Every unclaimed hour you logged for that child between those dates goes onto one form. The rows are frozen at that moment — correcting an entry afterwards cannot rewrite a form that has gone out. The sheet is numbered `TMS-2026-001`, its status becomes `Awaiting client`, and an email goes to the parent.

Run the same period twice and there is nothing left to claim:

You have logged no hours for that client between those dates.

Step 2 — the parent signs

In the client portal, Timesheets > open the form > Sign this timesheet. The parent draws their signature and submits.

- Only the parent the form is about may sign it, and only once. A signed time sheet is the record of what they confirmed, so it is not re-signable.
- The signed copy is filed separately. The unsigned original stays exactly as the aide generated it.
- The status becomes `Signed` and every active admin is emailed.

If the signed copy cannot be filed, the signature is not recorded and the parent is asked to try again — the form is the record, so it is never marked signed with no document behind it.

Step 3 — the admin reads it

Timesheets in the admin sidebar opens on the forms both sides have signed, because that is what an admin is here for. Widen the status filter to see the ones still awaiting a parent. You can search by time sheet number or child name, view the PDF, and remove a form.

Deleting a time sheet releases its hours.

The hours themselves outlive the form: removing a sheet hands its days back to the aide as unsheeted, so the period can be sheeted again rather than the work being lost. Only an admin can delete one.

The printed form

The PDF carries the child's name, date of birth and FSCD file number taken from the intake, a row per day across the four columns, the column totals and the grand total, and both signatures. Everyone party to the form — the aide, the parent and any admin — can open it.

Who can see whose

Role	Sees
Aide	Their own time sheets only. One aide cannot open another's.
Parent	Their own children's. The list follows the portal's child switcher, one child at a time, but any of their children's forms can be opened directly.
Admin	Every form the clinic holds.
Anyone else	Nothing. A therapist on the same care team has no business in an aide's sheet.

In the aide's and the admin's lists a family's forms are gathered together under the child's name, alphabetically. A parent's list is ungrouped — a heading over one child would be a heading over itself.

Test scripts

Thirty-two cases covering the release. TC-01 to TC-20 are the contracts half, TC-21 to TC-32 the aide half; the two groups are independent and can be run by different people. Within a group the cases run in order and several depend on the one before.

Part one · issuing and managing contracts

TC-01 Issue a contract	ADMIN
STEPS 1. Open a client with at least one availed service and go to the Contracts tab. 2. Click Issue Contract on one of the services. 3. Enter 40 hours, pick a funding code, set the period to cover today, and save. EXPECTED • A success message naming the new number, for example Contract CON-2026-004 issued. • The contract appears under that service with an Active badge, 40 hours, and 40 remaining. • The therapist shown on the contract is the one assigned to the service.	
TC-02 End date before start date is rejected	ADMIN
STEPS 1. Issue a contract with a period end earlier than its period start. EXPECTED • Saving is refused with A contract cannot end before it starts. Nothing is created.	
TC-03 Overlapping contracts are rejected	ADMIN
STEPS 1. On the service from TC-01, issue a second contract whose period shares at least one day with the first. 2. Then try again with a period starting the day after the first one ends. EXPECTED • The overlapping attempt is refused, and the message names the contract in the way, its number and its dates. • The back-to-back attempt succeeds. Periods that touch are fine; a shared day is not.	
TC-04 Delete an unused contract	ADMIN
STEPS 1. Delete the second contract created in TC-03, which has no sessions against it. EXPECTED • It is deleted, with a message naming the number. The first contract is untouched.	

Part one · booking and the hours gate

TC-05 A contracted service can be booked

THERAPIST

STEPS

1. Book a two-hour session for that client, inside the contract's period.
2. Open the services dropdown and read the entry before selecting it.
3. Save, then return to the admin Contracts tab.

EXPECTED

- The entry shows the service name, the hours left and the contract end date.
- The session saves.
- The contract now shows 2 hours used and 38 remaining.

TC-06 A service with no contract cannot be booked

ADMIN + THERAPIST

STEPS

1. As admin, add a new availed service to a client and issue nothing against it.
2. As the therapist, try to book a session covering that service.

EXPECTED

- The service does not appear in the dropdown.
- The Contracts tab shows No contract yet, so this service cannot be scheduled.

TC-07 A session larger than the balance is refused

ADMIN + THERAPIST

STEPS

1. As admin, edit a contract down to a small allotment — say 3 hours, with 2 already used.
2. As the therapist, try to book a two-hour session against it.

EXPECTED

- Refused, naming both figures: has 1 of 3 hours left on its contract, and this session needs 2.
- A one-hour session in the same slot saves.

TC-08 An exhausted contract drops out of the picker

THERAPIST

STEPS

1. Continue booking until the contract from TC-07 has no hours left, then open the session form again.

EXPECTED

- The service is gone from the dropdown; with nothing else available it reads No contracted services with hours left.
- On the admin Contracts tab the badge now reads Exhausted and remaining is 0.

TC-09 Booking outside the period is refused

ADMIN + THERAPIST

STEPS

1. As admin, issue a contract whose period is entirely in the past, and another entirely in the future.
2. As the therapist, try to book each one for today.

EXPECTED

- Neither appears for today's date.
- The reasons differ: one names the date the last contract ended, the other the date the next one starts.
- Booking on a date the future contract does cover works.

TC-10 Cancelling a session returns its hours

ADMIN + THERAPIST

STEPS

1. Note the remaining hours on a contract.
2. Cancel a session that drew from it.
3. Re-read the Contracts tab.

EXPECTED

- The hours are back. A contract that read Exhausted reads Active again.
- The month column on the hour-tracking sheet drops by the same amount.

TC-11 A no-show returns its hours too

ADMIN + THERAPIST

STEPS

1. Mark a session that drew hours as no-show.

EXPECTED

- Identical to TC-10: the hours return and the sheet follows.

TC-12 Editing a session does not fail against itself

THERAPIST

STEPS

1. Book a session that uses a contract's last remaining hours exactly.
2. Reopen it and move it ten minutes later, keeping the same length. Save.

EXPECTED

- It saves. The session's own hours are excluded when its balance is re-checked.
- Remaining hours are unchanged afterwards.

TC-13 Splitting a visit across services

ADMIN + THERAPIST

STEPS

1. Give one client two availed services, each with its own contract.
2. Book a two-hour session covering both, leaving the hour boxes empty. Save.
3. Reopen it, set one box to 1.5 and the other to 0.5, and save.
4. Reopen once more, set both to 1.5, and try to save.

EXPECTED

- The even split draws 1 hour from each contract.
- The manual split draws 1.5 and 0.5, and reopening the session shows those figures.
- The third attempt is refused: adds up to 3, but the session is 2 hours long.

TC-14 Contracts are drawn down independently

ADMIN + THERAPIST

STEPS

1. Using the two services from TC-13, keep booking until only one of the two contracts is empty.

EXPECTED

- The exhausted service disappears from the dropdown; the other remains.
- A visit covering both is refused, naming only the exhausted one.

Part one · editing, cancelling and the record**TC-15** Hours cannot be cut below what was delivered

ADMIN

STEPS

1. On a contract with hours already drawn, edit the allotment to a number below the used figure and save.

EXPECTED

- Refused, naming both numbers: Sessions have already drawn 6 hours from this contract, so it cannot be cut to 4.
- Cutting it to exactly the used figure is allowed, and the contract then reads Exhausted.

TC-16 A used contract cannot be deleted

ADMIN

STEPS

1. Try to delete a contract that has sessions against it.

EXPECTED

- Refused, with the message telling you to cancel it instead.
- The contract and its sessions are untouched.

TC-17 Cancelling a contract closes it without losing history

ADMIN + THERAPIST

STEPS

1. Cancel that same contract, adding a note.
2. As the therapist, try to book the service again.
3. Check the hour-tracking sheet.

EXPECTED

- The badge reads Cancelled and the note is saved.
- The service no longer appears in the dropdown.
- The contract still appears on the sheet with the hours it delivered. Cancelling withdraws authorization; it does not erase the record.

Part one · the hour-tracking sheet**TC-18** The sheet agrees with the contracts

ADMIN

STEPS

1. Open Hour Tracking and find a contract you have been booking against.
2. Compare N. Hours, the month columns and R. Hours against the Contracts tab.

EXPECTED

- N. Hours matches the allotment; R. Hours matches remaining.
- The month columns add up to used, and each session lands in the month it was scheduled in.
- Section subtotals and the grand total add up.

TC-19 Filters and the PDF

ADMIN + THERAPIST

STEPS

1. Narrow the range to a single month, then widen it across a year boundary.
2. Filter to one therapist.
3. Deliberately set From later than To.
4. Click Download PDF, then repeat the whole case as a therapist.

EXPECTED

- The column count follows the range; the year appears on the labels once the window crosses one.
- The therapist filter gives exactly what that therapist sees on their own page.
- A reversed range is swapped and shown, not rejected.
- The PDF matches the screen, filters included.

TC-20 Therapists see only their own contracts

THERAPIST

STEPS

1. Sign in as a therapist with contracts and open Hour Tracking.
2. Compare against the admin view filtered to that same therapist.

EXPECTED

- Only that therapist's contracts appear, with no Therapist column and no therapist filter.
- The two views show the same rows and the same figures.

Part two · the aide's half of the portal

TC-21 An aide gets Hours and Timesheets

AIDE + THERAPIST

STEPS

1. Sign in as an aide and read the sidebar.
2. Sign in as a non-aide therapist and read the sidebar.

EXPECTED

- The aide has Hours and Timesheets, and no Hour Tracking, Billing or Invoices.
- The therapist has Hour Tracking, Billing and Invoices, and no Hours.
- Everything above and below that pair — Dashboard, Calendar, Sessions, Clients, Reviews, Complaints, Profile — is the same for both.

TC-22 The split holds in the address bar

AIDE + THERAPIST

STEPS

1. As the aide, type the billing address (/therapist/billing) by hand.
2. As the non-aide therapist, type the hours address (/therapist/hours) by hand.

EXPECTED

- Each is redirected to the equivalent screen on their own side rather than shown an error.
- Neither reaches a form belonging to the other half.

TC-23 Logging hours saves one row per day

AIDE

STEPS

1. Hours > Log Hours. Pick a client and add three days.
2. Put figures in different columns on each day, including a fractional value such as 1.5.
3. Save, then read the Hours list.

EXPECTED

- Three days saved, confirmed by the message.
- Each row shows the day's total, and Days Not Sheeted has gone up by three.
- The fractional figure is kept exactly, not rounded to a whole hour.

TC-24 An empty day and a duplicated date are rejected

AIDE

STEPS

1. Add a day and leave all four columns blank. Try to save.
2. Fill it in, then add a second row with the same date. Try to save.

EXPECTED

- The first is refused: Enter at least one hour for this day.
- The second is refused: This date is already on the form. Put the day's hours on one row.

TC-25 Re-logging a day corrects it

AIDE

STEPS

1. Log 2 hours of Hourly Respite for a child on a given date.
2. Log that same child and date again with 3 hours instead.

EXPECTED

- One row, not two, showing 3 hours.
- Days Not Sheeted has not gone up a second time.

TC-26 An aide sees only their own hours

AIDE

STEPS

1. With hours logged by two different aides for the same child, open the Hours list as each of them.

EXPECTED

- Each aide sees only the days they logged, and the totals across the top count only their own.

Part two · generating, signing and reading**TC-27** Generating rolls the hours into one form

AIDE

STEPS

1. Timesheets > Generate Timesheet. Pick the child, a period covering the days from TC-23, and draw your signature.
2. Generate, then go back to the Hours list.

EXPECTED

- A sheet numbered TMS-2026-nnn, status Awaiting client, with a row per day and the four column totals.
- The grand total matches the days you logged.
- Those days now count as Sheeted, not Days Not Sheeted.
- The parent receives the email.

TC-28 The modal offers only children with hours waiting

AIDE

STEPS

1. Open Generate Timesheet again and read the client list.
2. Try the same period for the child you just sheeted.
3. Try to submit the form without drawing a signature.

EXPECTED

- A child with nothing left to sheet is not offered.
- Repeating the period is refused: You have logged no hours for that client between those dates.
- The form cannot be submitted without a real signature.

TC-29 Sheeted hours can no longer be removed

AIDE

STEPS

1. Try to delete a day that is now on the time sheet.
2. Log a fresh day and delete that one instead.

EXPECTED

- The sheeted day is refused: These hours are already on a timesheet and can no longer be removed.
- The unsheeted day deletes normally.

TC-30 The parent signs

PARENT + ADMIN

STEPS

1. Sign in to the client portal as the parent and open Timesheets.
2. Open the form, check the days and totals against what the aide logged, and sign it.
3. Try to sign the same form a second time.

EXPECTED

- The status becomes Signed and both signatures appear on the PDF.
- The admins are emailed.
- The form cannot be signed again.

TC-31 Nobody sees a form they are not party to

AIDE + PARENT

STEPS

1. As a second aide, try to open the first aide's time sheet by its address.
2. As a parent of a different child, try to open and sign that form.
3. As a parent with more than one child, switch children and check the list.

EXPECTED

- Neither the other aide nor the other family can reach it.
- The parent's list follows the child switcher, one child at a time, and is not grouped under a heading.

TC-32 The admin reads, prints and removes

ADMIN + AIDE

STEPS

1. Open Timesheets as an admin and read the default list, then widen the status filter.
2. Search by time sheet number, then by the child's name.
3. Open the PDF and check the child's name, date of birth and FSCD file number.
4. Delete the form, then sign in as the aide and open the Hours list.

EXPECTED

- The list opens on signed forms only; widening reveals the ones awaiting a parent.
- Forms are gathered under each child's name, alphabetically.
- The PDF carries the child's details and shows hours only — no rates and no amounts anywhere.
- After deletion the aide's days are back to unsheeted and the period can be sheeted again.

The nightly status sweep

A contract's badge is a cached value. A nightly job walks every contract and brings the badge back in line with what its period and balance actually say, marking them Expired or Exhausted as they fall due. Cancelled contracts are an admin's decision and are never recomputed.

Detail	Value
Command	<code>php artisan contracts:sweep</code>
Schedule	Daily
Output	Updated N service contract status(es).
Requires	A scheduler runner on the server. Declaring the schedule does not by itself run it.

To see it work without waiting a day, ask your developer to run the command by hand: back-date a contract's period end so it has lapsed, run the sweep, and watch the badge change from Active to Expired.

A badge going stale for a few hours costs nothing. The booking gate reads the period and the hours directly and never consults the badge, so a lapsed contract stops being schedulable at midnight whether or not the sweep has caught up.

Time sheets have no equivalent job. Nothing about them changes on a timer — a sheet moves only when the aide generates it, the parent signs it, or an admin removes it.

Behaviours that are deliberate

Please check this list before raising a ticket. Every item here is a decision, not a defect.

Contracts and the hour-tracking sheet

What you may notice	Why
A contract that expired at midnight still shows Active in the morning.	The badge is refreshed by the nightly sweep. The booking gate reads the period itself, so the service is already unbookable — only the label is behind.
A month cell is blank rather than 0.	Blank means no session was booked that month. That is a different fact from a month that drew nothing.
Cancelled contracts still appear on the hour-tracking sheet.	Their delivered hours are part of the record the sheet exists for.
The Therapist column names someone no longer assigned to the service.	The therapist is captured when the contract is issued. A later reassignment must not rewrite who delivered last month's hours.
A session that ran long still draws only its booked length.	Admin authorizes scheduled hours. A visit that overruns must not quietly resize the pool.
A backfilled contract has no funding code where the child is on insurance.	The sheet has never had a code for insurance. Inventing one would put a category in front of admins that the office does not use, so it is left for an admin to fill in.
No backfilled contract came out as split or BDS/split.	A split is a judgement about how one child's hours are shared, recorded nowhere in the data. Only an admin can say so.
A year-long contract shows on a one-month view of the sheet.	A contract is in scope when its period overlaps the window at all. Filtering on the start date instead would hide every contract issued before the window and leave the sheet reading empty.
Two contracts may sit back to back but not share a day.	Two live contracts covering the same day would leave the booking gate with a choice and no rule for making it.
There is no page listing all contracts.	A contract only means anything next to the service it covers, which is where it is issued and where it is read.

Aide hours and time sheets

What you may notice	Why
An aide's logged hours never appear on the hour-tracking sheet.	That sheet reads service contracts and booked sessions. Aide hours are a separate record and draw from no contract.
Aides have no Hour Tracking, Billing or Invoices screen.	An aide's record of work is the time sheet, and what those hours are worth is settled off the signed form by the clinic rather than priced line by line.
A therapist whose title is "Behavioural Consultant/Therapist (BC)" is not treated as an aide.	The aide side is matched on a position title ending in the word aide, so both "Behaviour Aide" and "Behavioural & Developmental Aide" qualify and a consultant does not.

Correcting an hours entry does not change a time sheet already generated.	The rows are frozen when the sheet is raised. A form the parent may already have signed cannot be rewritten underneath them.
Saving a day that is already logged overwrites it instead of adding a second row.	The printed grid assumes one row per child per day. This is how a mistake gets corrected.
A signed time sheet cannot be signed again.	It is the record of what the parent confirmed.
Deleting a time sheet does not delete the hours.	The hours outlive the form. They return to the aide as unsheeted so the period can be sheeted again rather than the work being lost.
The admin's Timesheets list looks short at first.	It opens on the forms both sides have signed, because that is what an admin is there for. Widen the status filter for the rest.
The printed form shows no money at all.	A time sheet carries hours. The money side is settled off it by the clinic.

Reporting a problem

The more of this you can include, the faster it can be traced:

Include	Example
The test case, if it came from one	TC-27, step 2
Who you were signed in as, and their role	Aide — Behaviour Aide
The client and the service	Client #418, Speech Therapy
The contract or time sheet number	CON-2026-004, or TMS-2026-011
The dates involved	Session 12 Sep 2026, 09:00 to 11:00; or the period 1–15 Sep 2026
What you expected, and what happened	Expected 38 hours remaining, the tab shows 40.
A screenshot of the message	The exact wording matters — several messages differ only in which reason they give.

Two things worth double-checking before you file.

On contract balances:
hours move only when a session is booked, edited, cancelled or marked no-show. If a figure looks wrong, check the sessions behind it first — a cancelled session that has returned its hours is the most common explanation for a balance that looks too high.

On the aide side:
if an aide is seeing Billing and Invoices instead of Hours and Timesheets, check their team-member position before anything else. The title has to end in the word aide.
